Can I has reverts?

Can I has reverts?

2008: Changesets and Reverts Proposal

1

Improve API

1

API as a Data Model

API 0.7

API 0.7

- Areas
- Locations on ways
- Removing untagged nodes

~~Simple Features~~

Being different is strength

References

```
<parent type=... id=... />
```

Better Versioning

```
<nd ref=... version=... />
```

Changing API is hard

Changing API means...

- Finding developers with the infrastructure knowledge
- Paying them for a few months' work
- Planning, testing, reaching out, etc
- Convincing gatekeepers the change is needed

2

API as an interface

New interfaces are a mess

Deleted Objects
+
Enhanced History

Deleted Objects + Enhanced History

2008: «The API would then basically support a call that says "revert changeset xy"»

Data model
defines you

Roads:
segments + relations

API defines
your tools

Changesets do not work

Atomic Changes

Atomic Changes

- Simple and revertable

Atomic Changes

- Simple and revertable
- Customized grouping

Atomic Changes

- Simple and revertable
- Customized grouping
- Human-readable descriptions

Changeset comment:

WHY, not WHAT
